

HTMLHint

How to display error message>>

col: 26

evidence: "<p>Welcome to my web app.</p>"

line: 4

message: "Special characters must be escaped : [<]."

raw: "Welcome to my web app.</p\n"

Split HTML code by line feed character and calculate the number of characters in each line

Convert HTMLHint error positions (rows and columns) to CodeMirror positions (characters)

Match converted error location information to CodeMirror format and set error information to the editor

Lint
(CodeMirror)

How to display errors users can see>>

1 <!DOCTYPE html>

2 <h1>Hello,World!<h1>

3 <p>Welcome to my web app.<p

4
